## (54) CODE TRANSMISSION METHOD

## (57)Abstract:

PURPOSE: To make a high-precision code transmission possible to perform a high- efficiency control, by transmitting a pair of a frame synchronizing code and an error correction code continuously plural times after a bit synchronizing code and by discriminating an information code by accurate receiving of one of these pairs.

CONSTITUTION: After a bit synchronizing code 11, a pair of a frame synchronizing code 12 and an error correction code 15 consisting of an information code 13 and a check code 14 is transmitted continuously plural times. When one of pairs of frame synchronizing codes 12 and error correction codes 15 transmitted continuously plural times is received accurately, the information code 13 is discriminated, and thus, a high-precision code transmission is made possible, and code transmission is performed with a high efficiency.
